

SITE **SAFETY** MANAGEMENT SOFTWARE A CLICK AWAY

WHEN YOU NEED TO BE SURE

SITE SAFETY MANAGEMENT AT YOUR FINGERTIPS

safeSTAX is a comprehensive web-based safety management system that enables you to manage contractors and employees across your sites. Using advanced technologies such as Smart Card and a Centralized Database, safeSTAX ensures that all aspects of safety management are covered. Risk Management, Safety Records Management and Access Control are all streamlined and fully integrated within the system enabling your business to perform any or all of the following site safety management functions:

-  Efficiently manage personal data and store records and documents
-  Effectively manage training, skills and qualifications
-  Create and manage work groups
-  Powerful training and skills need analysis
-  Control access to your site
-  Ensure that everyone who is onsite is qualified and has the appropriate training and/or induction
-  Powerful reporting capabilities
-  Manage fitness for work, i.e fatigue management and random drug and alcohol testing

RECORDS MANAGEMENT & STORAGE

WORKPLACE RECORDS

The safeSTAX system makes the task of keeping workplace records simple, secure and flexible. A web based centralised database is the core to the Records Management and Site Access Control components of the safeSTAX system. The safeSTAX system provides an easy to navigate and user friendly interface for efficient and simple record management. Personnel data can also be linked to a Smart Card to ensure access to sites can only be granted for those with the appropriate site requirements, skills, training and qualifications.

LIVE REPORTING

safeSTAX is an on-line system providing the most up to date information accessible 24 hours a day, 7 days a week.

SAFETY MANAGEMENT

The system can be used to validate invoiced hours, analyse hazards, outline preventative procedures, retrieve detailed personal records in case of an emergency and much more.

ACCESS CONTROL

The system allows managers to quickly evaluate key access and site related issues from remote offices anywhere in the world.

RISK MANAGEMENT

The safeSTAX system helps you manage risk by doing far more than just checking the credentials of any contractor or employee entering the site. It knows who they are, why they are there, whether they are fit to work and whether they are suitably qualified, inducted and assessed to be in a given area. The system automatically monitors who is allowed on site and for how long, making it easy to ensure sufficient breaks are taken or that site bans are enforced. Through the use of safeStax access terminals, the system can also display site-specific safety messages, notification of training or access expiry dates to individuals or groups.

FEATURES

- MANAGE SKILLS, TRAINING & QUALIFICATIONS
- MANAGE TRAINING & SKILLS USING NEEDS ANALYSIS MATRIX
- LIMIT ACCESS TO SELECTED PERSONS
- 24/7 UP TO DATE INFORMATION
- IMMEDIATE ACCESS TO DATA IN EVENT OF AN INCIDENT

ACCESS CONTROL

For worksites that are regulated or have a large number of personnel entering and leaving, safeSTAX access control offers significant benefits. Access is granted by automatically verifying qualifications and training requirements through the use of a Smart Card. Each employee or contractor is given a Smart Card with photo identification and unique identifier. As workers swipe their cards in front of a Smart Card reader, the system automatically validates the information and grants or denies access according to site requirements. It also keeps a record of who has entered where, and can be used to track and monitor the movement of employees and contractors throughout the site. The access control system can be integrated with doors and boom gates. The system also allows card holders to be issued with site bans, random drug and alcohol tests as well as managing fatigue and fitness for work.

FEATURES

- INSTANT VERIFICATION
- FITNESS FOR WORK
- FATIGUE MANAGEMENT
- RANDOM DRUG & ALCOHOL TESTS
- SITE BANS
- TRACK MOVEMENTS
- INTEGRATE WITH DOORS & BOOM GATES
